Van Alstyne Independent School District

New Construction

Bob and Lola Sanford Elementary School

Van Alstyne ISD launched construction of its second elementary school named Bob and Lola Sanford Elementary School on August 10, 2017. This two-story, 80,000-square-foot school was designed to house pre-K and first grades on the first floor and grades two through five on the second floor.

A unique element to this project for ATMAC and its HVAC services was the full gymnasium built to serve as the school's storm shelter. ATMAC worked with project engineers on a special housing FEMA grills. Space was also designated for after-school community activities and ATMAC provided HVAC and plumbing for a standard elementary school cafeteria and library.

The total HVAC and plumbing budget came in at \$2.6 million. The project was completed July 2018 within budget and on time to open for new students entering the 2018 to 2019 school year.
